Editors' preface to the 15th Edition

The *English Pronouncing Dictionary* was first published in 1917, perhaps the greatest work of the greatest of British phoneticians, Daniel Jones (born in 1881). Jones was Professor of Phonetics at University College London from 1921 until his retirement in 1949. He was still an occasional visitor to the Department in 1967 when Peter Roach went there as a postgraduate student of phonetics, though he died in December of that year. The dictionary was preceded by a now forgotten work by Michaelis and Jones (1913) in which the phonemic transcription was presented first and the corresponding spelling followed it. The last edition in which Jones was directly involved was the 12th, and the 13th was substantially revised by his successor as Professor of Phonetics at University College, A.C. Gimson. From the 13th edition, Gimson was assisted by Dr. Susan Ramsaran, and in her preface to the 14th edition she notes that they had been making plans for a 15th edition at the time of Gimson's death. After this, the publishing rights were acquired from the original publishers, J. M. Dent & Sons, by Cambridge University Press.

The *English Pronouncing Dictionary* has been in use for nearly 80 years, and during that time it has become established as a classic work of reference, both for native speakers of English wanting an authoritative guide to pronunciation and for users of English as a foreign or second language all over the world. Above all, the aim of the 15th edition has been to include information which is relevant to the needs of contemporary users and which is presented in the clearest possible way. This aim has informed both the choice of vocabulary covered and the range of pronunciations shown.

Over 18,000 new entries have been added to this edition of the dictionary to serve the interests and needs of today's users. For instance, large numbers of new words connected with science and technology are now included, as are hundreds of people and places which have acquired fame or notoriety in recent years. The more cosmopolitan nature of contemporary life is reflected in the increase of geographical names as well as a significant number of items of international cuisine. Personal names, both first names and family names, are now based on census reports and statistical analysis, and many subject areas such as literature and law, have been revised and updated. In addition to this, U.S. spellings and vocabulary items have been added.

With this 15th Edition, the *English Pronouncing Dictionary* has entered the computer age. The typeset text of the 14th Edition has been converted into a computer database, and the task of editing has been carried out by a team of phonetics experts who have worked by transferring the data of the developing new edition in electronic form between universities in Reading, Leeds, Kansas and Hong Kong, and the University Press in Cambridge. Despite the complexity of this operation, the process of updating and adding to the previous edition has been made more efficient, and will enable future revisions and new editions to be prepared much more rapidly. We expect that the dictionary will be useful not only as a conventional reference book but also as a database in computer-based research.

There are many people to whom we are grateful. Two people in particular have been indispensable. Jane Setter (Assistant Professor at Hong Kong Polytechnic University) has worked on the pronunciations since 1992; she has done an enormous amount of work on the transcriptions, combining phonetic expertise with skill in database technology and cheerfully keeping us from drifting into inconsistency. Liz Walter (Commissioning Editor, Cambridge University Press) has overseen the project since its beginning. She has made innumerable contributions to the work, suffered patiently when our work has been delayed, and always been ready to give us guidance. Other people who have worked on the pronunciations are Lee Hornbrook, Jonathan Rodgers, Karen Stromberg and Alison Tunley, while editorial contributions have been made by Ann Kennedy, Kerry Maxwell, Clea McEnery and Jane Walsh. We have often needed assistance with computing matters, and have been glad of the help provided by Simon Arnfield, Andrew Harley, Philip Makower and Robert Fleischman. Finally, we have often sought the advice of other phoneticians when we were in doubt over pronunciations. We would like to thank especially Jack Windsor Lewis, Mike MacMahon, Graham Pointon, Marion Shirt, Michael MT Henderson and Linda Shockey.

Introduction

It is strongly recommended that users of this dictionary read the introduction, since a full understanding of the information in it will ensure the most effective use of the dictionary.

(PART 1) 'What is the English Pronouncing Dictionary?': The intended use of the dictionary, the principles of its design and the accents of English represented in it.

(PART 2) 'Principles of Transcription': The main characteristics of the British and American accents.

(PART 3) 'Explanatory Notes': How to interpret the information provided with the individual words in the dictionary.

Part 1: Introduction to the English Pronouncing Dictionary

1.1 What is the English Pronouncing Dictionary?

This dictionary is designed to provide information on the current pronunciation of approximately 80,000 English words and phrases. For each entry, a British and an American pronunciation is shown (see Section 1.2 below). The pronunciation is given in modified phonemic transcription, and you need to understand the principles of phonemic transcription in order to be able to make proper use of this information (see Section 2.1 below).

The Pronouncing Dictionary provides much essential information that is not available in a general dictionary, such as the pronunciation of proper names, the pronunciation of all inflected forms of each word, and a larger amount of detail about variant pronunciations than is usual in a general dictionary.

1.2 Whose pronunciation is represented?

A pronouncing dictionary must base its recommendations on one or more *models*. A pronunciation model is a carefully chosen and defined accent of a language. In the first edition of this dictionary (1917), Daniel Jones described the type of pronunciation recorded as "that most usually heard in everyday speech in the families of Southern English persons whose menfolk have been educated at the great public boarding-schools". Accordingly, he felt able to refer to his model as "Public School Pronunciation" (PSP). In later editions, e.g. that of 1937, he added the remark that boys in boarding-schools tend to lose their markedly local peculiarities, whereas this is not the case for those in day-schools. He had by 1926, however, abandoned the term PSP in favour of "Received Pronunciation" (RP). The type of speech he had in mind had for centuries been regarded as a kind of standard, having its base in the educated pronunciation of London and the Home Counties (the counties surrounding London). Its use was not restricted to this region, however, being characteristic by the nineteenth century of upper-class speech throughout the country. The Editor of the 14th Edition of this dictionary, A. C. Gimson, commented in 1977 "Such a definition of RP is hardly tenable today", and went on "If I have retained the traditional, though imprecise, term 'received pronunciation', it is because the label has such wide currency in books on present-day English and because it is a convenient name for an accent which remains generally acceptable and intelligible within Britain".

For this edition a more broadly-based and accessible model accent for British English is represented, and pronunciations for one broadly-conceived accent of American English have been added. The time has come to abandon the archaic name *Received Pronunciation*. The model used for British English is what is referred to as *BBC English*; this is the pronunciation of professional speakers employed by the BBC as newsreaders and announcers on BBC1 and BBC2 television, the World Service and BBC Radio 3 and 4, as well as many commercial broadcasting organisations such as ITN. Of course, one finds differences between such speakers, but there is still a reasonable consensus on pronunciation in this group of professionals, and their speech does not carry for most people the connotations of high social class and privilege that PSP and RP have had in the past. An additional advantage in concentrating on the accent of broadcasters is that it is easy to gain access to examples, and the sound quality is usually of a very high standard.

For American English, the selection also follows what is frequently heard from professional voices on national network news and information programmes. It is similar to what has been termed "General American", which refers to a geographically (largely non-coastal) and socially based set of pronunciation features. It is important

to note that no single dialect – regional or social – has been singled out as an American standard. Even national media (radio, television, movies, CD-ROM, etc.), with professionally trained voices have speakers with regionally mixed features. However, "Network English", in its most colourless form, can be described as a relatively homogeneous dialect that reflects the ongoing development of progressive American dialects (Canadian English has several notable differences). This "dialect" itself contains some variant forms. The variants included within this targeted accent involve vowels before /r/, possible differences in words like 'cot' and 'caught' and some vowels before /l/. It is fully rhotic. These differences largely pass unnoticed by the audiences for Network English, and are also reflective of age differences. What are thought to be the more progressive (used by educated, socially mobile, and younger speakers) variants are listed first in each entry. The intent is to list the variety of pronunciations with the least amount of regional or social marking, while still being sensitive to the traits of the individual word.

1.3 How are the pronunciations chosen?

It is important to remember that the pronunciation of English words is not governed by a strict set of rules; most words have more than one pronunciation, and the speaker's choice of which to use depends on a wide range of factors. These include the degree of formality, the amount of background noise, the speed of utterance, the speaker's perception of the listener and the frequency with which the speaker uses the word. For example, the two words 'virtuous' and 'virtuoso' are closely similar in spelling and share a common origin. However, the former is more common than the latter, and for British English /'vɜː.tʃu.əs/ is given as the first pronunciation of the former but /'vɜː.tju.əʊ.səʊ/ for the latter (which in general is typical of more careful speech). If such variation did not exist, most of the work of compiling a pronouncing dictionary could be done easily by means of one of the available computer programs that convert English spelling into a phonemic transcription. Ultimately, however, the decisions about which pronunciation to recommend, which pronunciations have dropped out of use, and so on, have been based on the editors' intuitions as professional phoneticians and observers of the pronunciation of English (particularly broadcast English) over many years. The opinion of many colleagues and acquaintances has also been a valuable source of advice.

In general, a pronunciation typical of a more casual, informal style of speaking is given for common words, and a more careful pronunciation for uncommon words. In real life, speakers tend to articulate most carefully when listeners are likely to have difficulty in recognising the words they hear. When more than one pronunciation of a word is given, the order of the alternatives is important. The first pronunciation given is believed to be the most usual one although the distance between the alternatives may vary, with some alternant forms rivalling the first-given in perceived frequency while others may be a more distant second.

1.4 Regional Accents

A pronouncing dictionary that systematically presented the pronunciations of a range of regional accents would be very valuable, but it would be very much bigger than the present volume and the job of ensuring an adequate coverage which treated all accents as equally important would have taken many years. In the case of place-names, information about local pronunciations has been retained or added as well as "official" broadcasting ones, but the other words are given only in the standard accents chosen for British and American English.

1.5 Pronunciation of foreign words

Many of the words in an English dictionary are of foreign origin, and in previous editions of this dictionary many such words have been given both in an Anglicised pronunciation used by most English speakers, and in a broad phonetic transcription of the "authentic" pronunciation in the original language. This edition does not give phonetic transcriptions of all the foreign words; the primary aim of this dictionary is to list pronunciations likely to be used by educated speakers of English, and an authentic pronunciation would in some circumstances be quite inappropriate (pronouncing 'Paris' as /pæ'riː/, for example). In some cases the information is unnecessary (very few English speakers would attempt, or even recognise, an authentic pronunciation of a word from a non-European language), while in other cases it is difficult to establish the authentic original (many African place-names, for example, have reached us after being adapted by British, French or Portuguese colonists; place-names in Spain may be pronounced in different ways according to their regional affiliation, so that the name of Barcelona might be given a Catalan or a Castilian Spanish pronunciation, while other Spanish names are different according to whether they originate in

Spain or South America). Words and names of foreign origin are therefore given in what is felt to be the pronunciation most likely to be used among educated speakers of English.

In some cases it is possible to identify an alternative pronunciation which represents an attempt to pronounce in a manner closer to the supposed original. This is marked by first indicating the language which the speaker would be aiming at, then giving the pronunciation, using where necessary additional phonetic symbols not required for the phonemic transcription of English. For example, the word 'bolognese' is widely used to refer to a sauce served with pasta. This is given as /ˌbɒl.əˈneɪz/ for British English and as /ˌboʊ.ləˈniːz/ for American; for speakers of both groups, a pronunciation aimed at being nearer to the Italian original would be /ˌbɒl.əˈnjeɪ.zeɪ/ (though this would still be different from the pronunciation that would be produced by an Italian speaker). To indicate that this last pronunciation is aimed at sounding Italian, it is marked in the entry as: *as if Italian:* ˌbɒl.əˈnjeɪ.zeɪ. In a few cases it has been necessary to mark separate British and American pronunciations within this field, as the degree of Anglicisation of any given word may vary between British and American English.

1.6 Usage notes

Usage notes are included with some words. In some cases these are needed so that users of the dictionary can understand how alternative pronunciations are to be used. In some cases the rules needed for correct pronunciation are quite complex, most noticeably in the case of the so-called "weak-form words" such as 'there', 'her'. Explanations with examples are given in such cases.

1.7 Syllable divisions

Earlier editions of this dictionary regularly marked the division between syllables. This practice was largely abandoned in the 14th Edition, but this new edition gives syllable divisions in all cases, since it is felt that foreign learners will find the information useful. Syllable division is marked with the symbol . recommended by the International Phonetic Association. The decision on where to place a syllable division is not always easy, and the rules used in this work are explained later in this Introduction (Section 2.6).

Part 2: Principles of transcription

2.1 The phoneme principle

The basic principle of the transcription used is, as in all previous editions, *phonemic*. This means that a small set of symbols is used to represent the sounds that can be shown to be distinctive in English, so that replacing one phoneme by another can change the identity of a word. We do not usually add phonetic detail such as the presence of glottal stops, aspiration or vowel devoicing. It is usual to put slant brackets before and after symbols representing phonemes (e.g. the word 'cat' would be represented phonemically as /kæt/). When non-phonemic symbols are used, the convention is to use square brackets (e.g. the glottal stop will be represented as [ʔ]). In entries in the dictionary itself, however, we do not use these brackets, in order to keep the information simple; only in explanatory notes do we use slant or square brackets. For an explanation of the principle of the phoneme and some of the problems associated with it, see Roach (1991), Chapters 5 and 13. The use of phonemic transcription in works on pronunciation (including this one) has remained in the "realist" tradition established by Jones, while approaches to the phoneme by theoretical phonologists have changed radically during recent decades and become much more abstract. There are a few exceptions to our general use of the phoneme principle that should be mentioned here, however. One is the use, in American pronunciations, of the [̬] diacritic to indicate the "flapping" of /t/ in words such as 'getting' /ˈget̬.ɪŋ/, and 'better' /ˈbet̬.ɚ/. This is an important feature of American pronunciation, but speakers of British English find it difficult to apply the rule which determines when phonemes are flapped. Another is the use of the symbols [i] and [u], the use of which is explained below (Section 2.9). Finally, it is necessary to use a number of special symbols which are not normally used for English phonemes. This set includes some nasalised vowels used particularly in some words taken from French, the [x] sound found in Scottish words such as 'loch', and some non-linguistic sounds used in certain exclamations and interjections (see Section 2.4).

2.2 Vowels and diphthongs

It is standard practice in phonetics to represent the quality of vowels and diphthongs by placing them on a four-sided figure usually known as the *Cardinal Vowel quadrilateral* (see Roach (1991), pp 11-14). This device is used in the vowel descriptions in the following section.

(a) British English

British English (BBC accent) is generally described as having short vowels, long vowels and diphthongs. There are said to be seven short vowels, five long ones and eight diphthongs. At the end of this section some attention is also given to triphthongs.

- Short vowels:

pit	pet	pat	putt	pot	put	another	
ɪ	e	æ	ʌ	ɒ	ʊ	ə	ə

- Long vowels:

bean	barn	born	boon	burn
iː	ɑː	ɔː	uː	ɜː

- Diphthongs:

bay	buy	boy	no	now	peer	pair	poor
eɪ	aɪ	ɔɪ	əʊ	aʊ	ɪə	eə	ʊə

These vowels and diphthongs may be placed on the Cardinal Vowel quadrilateral as shown in Figs. 1-3. It should be noted that though each vowel (or diphthong starting-point) is marked with a point (●), it is misleading to think of this as a precise target; the point represents the centre of an area within which the typical vowel pronunciation falls.

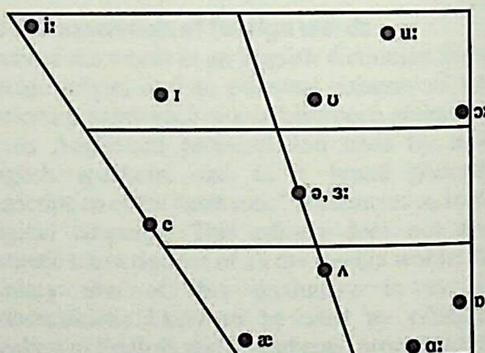

Fig. 1 BBC English pure vowels

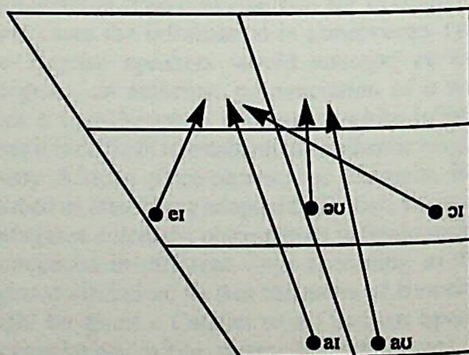

Fig. 2 BBC English closing diphthongs

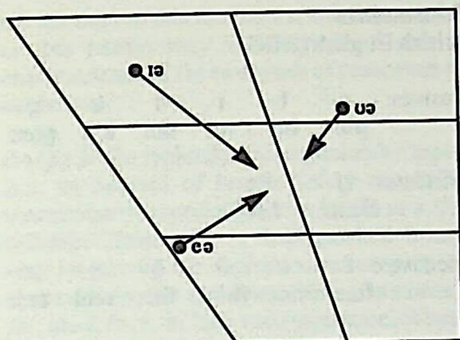

Fig. 3 BBC English centring diphthongs

A few comments on individual vowels and vowel symbols are needed. The pronunciation of any language is constantly changing, and a dictionary such as this one should reflect such changes. However, there is a general reluctance among users of phonemic transcription to change the symbols used too frequently, as this causes existing teaching materials and textbooks to become out of date. The following remarks apply chiefly to BBC pronunciation.

(a) The length of long vowels and diphthongs is very much reduced when they occur in syllables closed by the consonants / p, t, k, tʃ, f, θ, s, ʃ /. Thus /iː/ in 'beat' has only about half the length of /iː/ in 'bead' or 'bee'; similarly /eɪ/ in 'place' is much reduced in length compared with /eɪ/ in 'plays' or 'play'.

(b) The vowel /æ/, classified as a short vowel, is nevertheless generally lengthened before /b, d, g, dʒ, m , n/. Thus /æ/ in 'bag' is considerably longer than /æ/ in 'back'. The quality of this vowel is now more open than it used to be, and the symbol /a/ might one day be considered preferable. We have retained the /æ/ symbol partly because it is phonetically appropriate for the corresponding American vowel.

(c) The vowel /ʌ/ used to be a back vowel, and the symbol was chosen for this reason. This is no longer a back vowel, but a central one. Alternative symbols could be considered in the future.

(d) Among younger speakers, the /uː/ vowel has moved to a more front quality, with less lip-rounding, particularly when preceded by /j/ as in 'use'.

(e) Among the diphthongs, there seems to be a progressive decline in the use of /ʊə/, with /ɔː/ taking its place (e.g. the pronunciation of the word 'poor' as /pɔː/ is increasingly common).

(f) Triphthongs create some problems. These three-vowel sequences are generally held to be composed of one of the diphthongs /eɪ, aɪ, ɔɪ, əʊ, aʊ/ plus a schwa (e.g. 'layer' /leɪəʳ/; 'fire' /faɪəʳ/). In British English many of these triphthongs are pronounced with such slight movement in vowel quality that it is difficult for foreign learners to recognise them; for example, the name 'Ireland', which is generally transcribed /ˈaɪə.lənd/, frequently has an initial syllable which sounds virtually indistinguishable from /ɑː/. It seems reasonable in this case to treat these sounds as being monosyllabic (e.g. the word 'fire' is a single syllable), but in other words and names transcribed with the same symbols it seems necessary to insert a syllable division. This is usually done (i) when there is a morpheme boundary (e.g. 'buyer' /baɪ.əʳ/) and (ii) when the word is felt to be foreign (this includes many Biblical names originating from Hebrew, e.g. 'Messiah').

Another problem with triphthongs is that before an /r/ consonant at the beginning of a following syllable, the distinction between /aɪə/ and /aɪ/ seems to be neutralised – it seems to make no difference whether one represents 'Irish', 'irate' as /ˈaɪə.rɪʃ/, /aɪəˈreɪt/ or as /ˈaɪ.rɪʃ/ , /aɪˈreɪt/, since there is no regular distinction made in pronunciation. In general, the practice of this edition is to transcribe such cases as /aɪə- /.

(b) American English

American English is commonly described as having lax vowels, tense vowels, and wide diphthongs. Generally speaking, lax vowels are lower and made with less oral tension; they do not usually end syllables. Vowel length in American English is generally considered to be conditioned by phonological environment, so the long/short distinction described for BBC English is not usually present, though we have retained the length mark on the tense vowels /iː, ɑː, ɔː, ɜː/ in order to mark their relationship to the English long vowels. Since the diphthongal movement in /eɪ/ and /oʊ/ is small in American pronunciation, these are treated as tense vowels. Vowels preceding /r/ are notably influenced by rhotic colouring. Word spellings such as 'bird', 'word', 'curd', 'earth', 'jerk', which now rhyme with /ɜːr/ in American English, at one time in history had differing vowels. The retroflexed vowels /ɜːr/ and /ɚ/, stressed and unstressed, are among those features that noticeably distinguish

American English from BBC English. All vowels occurring before /r/ within a syllable are likely to become "r-coloured" to some extent.

- lax vowels: ɪ e æ ʊ ə
- tense vowels: iː ɑː ɔː ɜː eɪ oʊ
- wide diphthongs: aʊ aɪ ɔɪ
- retroflexed vowels ("r-coloured") ɚ ɜːr

There is an issue in the symbolization of the diphthong in the word "home". This has for many years been represented as /əʊ/, but in earlier editions of this and others of Jones' works the symbolization /ou/ indicated a rounded initial vowel. This is still the preferred transcription for the American English diphthong. In order to preserve compatibility with other works, we have chosen to use /əʊ/ for BBC English and /oʊ/ for American, though it can be argued that the latter symbolization would be suitable for both.

The American /æ/ vowel is somewhat closer than BBC /æ/, and seems to be evolving into an even closer vowel in many speakers. It is used in the same words as BBC /æ/ and also in most of the words which in BBC have /ɑː/ when there is no letter r in the spelling, e.g. 'pass', 'ask'. The quality of American /ɑː/ is similar to the BBC /ɑː/ vowel; it is used in some of the words which have /ɑː/ in BBC when there is no letter r in the spelling (e.g. 'father', 'calm'). It also replaces the BBC short /ɒ/ vowel in many words (e.g. 'hot', 'top', 'bother'): 'bother' rhymes with 'father'. American /ɔː/ is more open in quality than BBC /ɔː/. It is used where BBC has /ɔː/ (e.g. 'cause', 'walk'), and also replaces BBC short /ɒ/ in many words, e.g. 'long', 'dog'. American /uː/ is similar to BBC /uː/, but is also used where BBC has /juː/ after alveolar consonants (e.g. 'new', 'duty').

2.3 Consonants

(a) British English (BBC)

- Plosives: p **pin**, b **bin**, t **tin**, d **din**, k **kin**, g **gum**
- Affricates: tʃ **chain**, dʒ **Jane**
- Fricatives: f **fine**, v **vine**, θ **think**, ð **this**, s **seal**, z **zeal**, ʃ **sheep**, ʒ **measure**, h **how**

- Approximants: l **light**, r **right**, w **wet**, j **yet**

These consonants can be arranged in table form as shown below. The layout of the symbols follows the principle that, where there are two consonants which differ only in voicing, they are placed side by side with the voiceless one to the left.

(a) Certain types of consonant have a distinction such as that between /t/ and /d/; this is commonly classed as a distinction between voiceless and voiced consonants, but the distinction is in fact much more complex. Consonants usually classed as voiceless are /p, t, k, f, θ, s, ʃ, h, tʃ/, with voiced partners /b, d, g, v, ð, z, ʒ, dʒ/. Since the presence or absence of voicing is often less important than some other phonetic features, it has been suggested that instead the terms *fortis* (equivalent to voiceless) and *lenis* (equivalent to voiced) should be used. These terms imply that the main distinguishing factor is the amount of energy used in the articulation (fortis consonants being made with greater energy than lenis). These terms

are not used in this dictionary, since the usefulness of this terminology is uncertain. Some of the characteristics of the two types of consonant are set out below.

(b) /p,t,k/ are typically accompanied by aspiration (i.e. an interval of breath before the following vowel onset), especially when initial in a stressed syllable. Thus, 'pin' is distinguished from 'bin' very largely by the aspiration accompanying /p/. However, in the syllable-initial sequences /sp-, st-, sk-/, /p, t, k/ lack such aspiration. When /l/ or /r/ immediately follow /p,t,k/, they are devoiced and are pronounced as fricatives. Another characteristic of /p,t,k/ that is not marked in transcriptions is glottalization; when one of these consonants is followed by another consonant it is now usual to find that a glottal closure precedes the /p/, /t/ or /k/, particularly if the syllable in which they occur is stressed. Thus the pronunciation of 'captain', 'rightful', 'Yorkshire', which are phonemically /ˈkæp.tɪn/, /ˈraɪt.fᵊl/, /ˈjɔːk.ʃəʳ/, could be shown (using the symbol [ʔ] for glottal closure) as [ˈkæʔp.tɪn], [ˈraɪʔt.fl̩], [ˈjɔːʔk.ʃəʳ]. Similarly, in American English 'mountain' has one pronunciation that could be represented as [maʊ̃.ʔn̩].

(c) Voiceless consonants have a shortening effect on sounds preceding them within a syllable. Thus in the words 'right' and 'ride' (/raɪt/ and /raɪd/) the diphthong is noticeably shorter in the first word than in the second; in the words 'bent' and 'bend' (/bent/ and /bend/), both the vowel /e/ and the nasal consonant /n/ are shorter in the first word. This length difference is not always easy to observe in connected speech.

(d) The consonant /l/ has two different allophones in BBC English, the so-called "clear" and "dark" allophones. The "clear" one (which has an /iː/-like quality) occurs before vowels, the "dark" one (which has an /uː/-like quality) before consonants or before a pause.

(e) The consonants /ʃ/, /ʒ/, /tʃ/, dʒ/, /r/ are usually accompanied by lip-rounding.

(b) American English

The consonants of the American English model, at the phonemic level, may be represented by the same broad scheme used for British English above. Similarly, many of the distinguishing phonetic traits discussed for British English hold for American English as well: initial /p,t,k/ are normally aspirated except when immediately preceded by /s/. Glottalization preceding and, at times, replacing the plosives occurs often in rapid speech. There are, of course, numerous phonetic and phonological differences between British and American English, as there are within regional and social varieties within the two political entities. Two differences receive sufficient attention and have attained sufficient generality within the two varieties that they are represented here. One is phonetic: the "flapped" medial /t/ (as in 'butter') is transcribed as /t̬/ (see Section 2.1 above); the other is phonological: the presence (in American English) of postvocalic /r/ (as in 'farmer' /ˈfɑːr.mɚ/). It should also be noted that the difference between "clear" and "dark" /l/ is much less marked in American than in the BBC accent, so that even prevocalic /l/ in American pronunciation sounds dark to English ears.

2.4 Non-English sounds

In addition to the phonemes of English described above, most English speakers are aware of, and often attempt to pronounce, some sounds of languages other than English. The number of such sounds is small, since most foreign words and names are Anglicised so that they are pronounced with English phonemes. We find the voiceless velar fricative [x] in the Gaelic languages of Scotland and Ireland in words such as 'loch' and names such as 'Strachan'. The same sound is often used by English speakers for the German sound which is written 'ch' (e.g. 'Bach' [bɑːx]) and the Spanish sound spelt 'j' (e.g. 'Badajoz' [ˌbæd.əˈxɒθ]), though these sounds are often not really velar fricatives. The voiceless lateral fricative [ɬ] is found (always represented in spelling with 'll') in Welsh words and names such as 'Llanberis'; we give the pronunciation of this sound as *h*l to indicate that it may be pronounced as a voiceless [ɬ] (as many British English speakers do), but alternatively as a voiced one: thus /*h*lænˈber.ɪs/. The dictionary lists a few names with more than one of these sounds (e.g. Llanelli). Most non-Welsh speakers are unlikely to pronounce more than one [ɬ] sound in a word, so we give the pronunciation as /θl/ for 'll' sounds after the initial one.

The other case which needs special attention is the pronunciation of French nasalised vowels. Many English speakers attempt to produce something similar to the French vowels /ɛ̃/, /ɑ̃/, /ɔ̃/, /œ̃/ in words such as 'vin rouge', 'restaurant', ' bon marché', 'Verdun'.

Although many speakers do not get close to the French vowels, the principle adopted here is to use symbols for English vowels, with added nasalisation. The equivalents are:

2.5 Stress

Stress patterns present one of the most difficult problems in a pronouncing dictionary. One reason for this is that many polysyllabic words have more than one possible stress pattern, and one must consider carefully which should be recommended. Secondly, the stress of many words changes in different contexts, and it is necessary to indicate how this happens. Thirdly, there is no straightforward way to decide on how many different levels of stress are recognisable.

(a) Where more than one stress pattern is possible, the preferred pronunciation is given first and then alternatives are listed. Many dictionaries use the convention of representing stress patterns using dashes to represent syllables: thus the two possible patterns for 'cigarette' (ˌciga'rette and 'cigarette) can be shown as ˌ--'- and '---. This convention, which is sometimes referred to (incorrectly) as "Morse Code", is used in this work for short words, since it is economical on space. However, in longer words users are likely to find it difficult to interpret. In the planning of this edition, an experiment was carried out to test this, and it was found that readers (both native speakers and non-native speakers of English) do indeed take less time to read word stress patterns when the whole word is given, rather than just a "dashes and dots" pattern (Stromberg and Roach, 1993). Consequently, words of more than three syllables are given in full when alternative stress patterns are being given.

(b) The most common case of variable stress placement caused by context is what is usually nowadays known as "stress-shift". As a general rule, when a word of several syllables has a stress near the end of the word, and is followed by another word with stress near its beginning, there is a tendency for the stress in the first word to move nearer the beginning if it contains a syllable that is capable of receiving stress. For example, the word 'academic' in isolation usually has the stress on the penultimate syllable /-dem-/. However, when the word 'year' follows, the stress is often found to move to the first syllable /æk-/. The whole phrase 'academic year' will have its primary stress on the word 'year', so the resulting stress pattern will be ˌacademic 'year (where ˌ represents secondary stress and ' represents primary stress). To make this process easier to understand, this dictionary now gives specific examples in each case where stress-shift is possible except where certain prefixes such as 'un-' produce hundreds of such cases. In general, this shift is not obligatory: it would not be a mispronunciation to say acaˌdemic 'year. However, it is undoubtedly widespread and in some cases is used almost without exception: for example, although the adjective 'compact' on its own is pronounced with the stress pattern -'-, in the phrase 'compact disc' it is virtually always pronounced with stress on the first syllable.

(c) It is necessary to decide how many levels of stress to mark. The minimum possible range is two: stressed and unstressed. This is inadequate for representing English words in a pronouncing dictionary: a word such as 'controversial' clearly has stress(es) on the first and third syllables, and equally clearly has stronger stress on the third syllable than on the first. It is therefore necessary to recognise an intermediate level of stress ("secondary"). The transcription of this word, therefore, is /ˌkɒn.trə'vɜː.ʃəl/. An argument can be made for recognising yet another level (tertiary stress): in a word such as 'indivisibility', for example, it can be claimed that the level of stress on the third syllable /vɪz/ is weaker than that on the first syllable /ɪn/, which has secondary stress (primary stress being placed on the penultimate syllable /bɪl/). However, introducing this extra level creates a degree of complexity that it is better to avoid. In EPD14 some long polysyllabic words were transcribed with two primary stress marks (e.g. 'cross-examination' was given as /'krɒsɪgˌzæmɪ'neɪʃn/): for the present edition only one primary stress may occur in a word or compound.

(d) Secondary stresses have only limited occurrence after a primary stress: such a secondary stress is only marked in closed or hyphenated compound words where the second element is polysyllabic (e.g. 'fishˌmonger).

(e) Stress assignment on prefixes:

(i) In words containing a prefix such as, for example, con-, de-, im-, in-, secondary

stress is not applied to the prefix where the following (i.e., second) syllable is stressed. Examples include 'intoxicate' /ɪnˈtɒk.sɪ.keɪt ⓤⓢ -ˈtɑːk-/.

(ii) Where the prefix is separable, however, as in impossible, a variant showing secondary stress on the prefix is listed, as follows: /ɪmˈpɒs.ə.bl̩ ˌˌɪm -/.

(iii) In all other cases, primary or secondary stress is applied to the prefix where appropriate.

2.6 Syllable divisions

The 14th Edition of EPD marked syllable division (using hyphens) only when it was important to distinguish between the affricate /tʃ/ and the phonemes /t/ and /ʃ/ at a syllable juncture (e.g. 'satchel' /ˈsætʃəl/ and 'nutshell' /ˈnʌt-ʃel/). However, although native speakers may well find no difficulty in dividing words into syllables, it seems that learners of English have trouble in doing so, and the divisions are therefore marked. Descriptions of stress and rhythm are usually expressed in terms of syllables, and so it is helpful to have polysyllabic words clearly broken up into their constituent syllables. The syllabified transcription of a polysyllabic word is easier to read and interpret than an undivided one. In addition, the dictionary is likely to be of interest to the field of speech and language technology, where syllable divisions can be useful in developing automatic speech and language analysis systems.

A dot . is used to divide syllables, in accordance with the current recommendations of the International Phonetic Association (these may be read in the *Journal of the International Phonetic Association*, Vol.19.2, (1989), pp.67-80, and in the forthcoming *IPA Handbook*). However, this is not used where a stress mark ˈ or ˌ occurs, as these are effectively also syllable division markers.

No completely satisfactory scheme of syllable division can be produced – all sets of rules will throw up some cases which cannot be dealt with properly. The principles used in this edition are set out below. This requires some discussion of *phonotactics*, the study of permissible phoneme sequences.

(a) As far as possible, syllables should not be divided in a way that violates what is known of English syllable structure. The 'Maximal Onsets Principle', which is widely recognised in contemporary phonology, is followed as far as possible. This means that, where possible, syllables should be divided in such a way that as many consonants as possible are assigned to the beginning of the syllable to the right (if one thinks in terms of how they are written in transcription), rather than to the end of the syllable to the left. However, when this would result in a syllable ending with a stressed /ɪ/, /e/, /æ/, /ʌ/, /ɒ/ or /ʊ/, it is considered that this would constitute a violation of English phonotactics, and the first (or only) intervocalic consonant is assigned to the preceding syllable; thus the word 'better' is divided /ˈbet.əʳ/, whereas 'beater' is divided /ˈbiː.təʳ/. In the case of unstressed short vowels, /e/, /æ/, /ʌ/ and /ɒ/ are also prevented from appearing in syllable-final position; however, unstressed /ɪ/ and /ʊ/ are allowed the same "privilege of occurrence" as /ə/ when a consonant begins a following syllable, and may therefore occur in final position in unstressed syllables except pre-pausally. Thus in a word such as 'develop', the syllable division is /dɪˈvel.əp/.

(b) Notwithstanding the above, words in compounds should not be re-divided syllabically in a way that does not agree with perceived word boundaries. For example, 'hardware' could in theory be divided /ˈhɑː.dweəʳ/, but most readers would find this counter-intuitive and would prefer /ˈhɑːd.weəʳ/. This principle applies to open, closed and hyphenated compounds.

2.7 Assimilation

Assimilation is a process found in all languages which causes speech sounds to be modified in a way which makes them more similar to their neighbours. A well-known example is that of English alveolar consonants such as /t , d , n/, which, when they are followed by a consonant which does not have alveolar place of articulation, tend to adopt the place of articulation of the following consonant. Thus the /t/ at the end of 'foot' /fʊt/ changes to /p/ when followed by /b/ in the word 'football', giving the pronunciation /ˈfʊp.bɔːl/. A similar case is the assimilation of /s/ to a following /ʃ/ or /j/, resulting in the pronunciation of 'this ship' as /ðɪʃˈʃɪp/ and 'this year' as /ðɪʃˈjɪəʳ/. This assimilation can be considered to be optional.

The assimilation of /n/ is a rather special case: many English words begin with the prefixes 'in-' and 'un-', and in a number of cases the /n/ of these prefixes is followed by a consonant which is not

For example, 'hardware' could in theory be divided /'hɑː.dweəʳ/, but most readers would find this counter-intuitive and would prefer /'hɑːd.weəʳ/. This principle applies to open, closed and hyphenated compounds.

2.7 Assimilation

Assimilation is a process found in all languages which causes speech sounds to be modified in a way which makes them more similar to their neighbours. A well-known example is that of English alveolar consonants such as /t , d , n/, which, when they are followed by a consonant which does not have alveolar place of articulation, tend to adopt the place of articulation of the following consonant. Thus the /t/ at the end of 'foot' /fʊt/ changes to /p/ when followed by /b/ in the word 'football', giving the pronunciation /'fʊp.bɔːl/. A similar case is the assimilation of /s/ to a following /ʃ/ or /j/, resulting in the pronunciation of 'this ship' as /ðɪʃ'ʃɪp/ and 'this year' as /ðɪʃ'jɪəʳ/. This assimilation can be considered to be optional.

The assimilation of /n/ is a rather special case: many English words begin with the prefixes 'in-' and 'un-', and in a number of cases the /n/ of these prefixes is followed by a consonant which is not

alveolar. In some cases it seems to be normal that the /n/ is regularly assimilated to the place of articulation of the following consonant (e.g. 'inquest' /ˈɪŋ.kwest/), while in others this assimilation is optional (e.g. 'incautious' may be /ɪnˈkɔː.ʃəs/ or /ɪŋˈkɔː.ʃəs/). Where it is clear that the prefix is attached to a word that exists independently, so that prefix and stem are easily separable, the assimilation is normally treated as optional. When it seems more like an integral part of the word, the assimilation is shown as obligatory. The occurrence of assimilation in British and American English may differ.

2.8 Treatment of /r/

The accent used for British English is classed as *non-rhotic* – the phoneme /r/ is not usually pronounced except when a vowel follows it. The American pronunciations, on the other hand, do show a rhotic accent, and in general in the accent described, /r/ is pronounced where the letter r is found in the spelling.

It is necessary to show, in British English entries, cases of *potential* pronunciation of /r/, mainly in word-final position; in other words, it is necessary to indicate, in a word such as 'car', that though the word when said in isolation does not have /r/ in the pronunciation (/kɑː/), there is a *potential* /r/ which is realised if a vowel follows (e.g. in 'car owner'). This is indicated by giving the transcription as /kɑːʳ/, where the superscript /ʳ/ indicates the potential for pronunciation. This is traditionally known as 'linking r'. A controversial question is that of so-called 'intrusive r', where the phoneme /r/ is pronounced when no 'r' is seen in the spelling. For example, the phrase 'china and glass' will often be pronounced with /r/ at the end of the word 'china'; although this type of pronunciation is widespread in the speech of native speakers of the accent described, it is still safer not to recommend it to foreign learners, and it is therefore avoided in this dictionary.

2.9 Use of /i/ and /u/

There are many places in present-day British and American English where the distinction between /ɪ/ and /iː/ is neutralised. For example, the final vowel of 'city' and 'seedy' seems to belong neither to the /ɪ/ phoneme nor to /iː/. The symbol /i/ is used in this case (though it is not, strictly speaking, a phoneme symbol; there is no obvious way to choose suitable brackets for this symbol, but phoneme brackets // will be used for simplicity). A parallel argument can be made for the distinction between /ʊ/ and /uː/ (with a corresponding 'neutralised' symbol /u/), though this is needed much less frequently. This issue, and the issues which follow, are discussed in detail in Roach (1991), pp. 77-78.

(a) In word-final position, /ɪ/ and /ʊ/ do not occur. Word-final, close vowels are transcribed with /i/ and /u/ if unstressed. Word-final /iː/ and /uː/ are possible both with stress ('grandee', 'bamboo') and without ('Hindi', 'argue'), although in the unstressed case it is often not possible to draw a clear line between /iː/ and /i/, or between /uː/ and /u/.

(b) In compounds such as 'busybody' and names such as 'Merryweather', /i/ is permitted to occur word-medially, e.g. 'busybody' is transcribed /ˈbɪz.iˌbɒd.i ⓤⓢ ˈbɪz.i.bɑː.di/ and 'Merry-weather' as /ˈmer.iˌweð.əʳ ⓤⓢ ˈmer.i.weð.ɚ/. In all other cases word-medially, /ɪ/ is used when the vowel is unstressed, unless a vowel follows (see below).

(c) The vowel symbols /ɪ/ and /ʊ/ only occur in front of another vowel symbol if they form part of a composite (diphthong or triphthong) phoneme symbol (e.g. /ɪə, ʊə/). Otherwise /i/ or /u/ is used (e.g. 'scurrying' /ˈskʌr.i.ɪŋ/, 'influenza' /ˌɪn.fluˈen.zə/.

(d) A matter related to this decision concerns words ending in '-ier', '-eer', '-ia'. The usual transcription in the 14th Edition of the EPD was /ɪə/. However, 'reindeer' and 'windier' (comparative form of 'windy') do not have identical pronunciations in their final syllables in British English (BBC). In this edition, the alternative /-jə/ previously given for the latter type of word has been dropped; 'reindeer' is transcribed as /ˈreɪn.dɪəʳ/ and 'windier' as /ˈwɪn.di.əʳ/. The latter transcription, which indicates a different (closer) vowel quality in the second syllable of 'windier', and implies a pronunciation with three rather than two syllables, is felt to be accurate in terms of contemporary pronunciation.

The long vowels /iː/ and /uː/ may also occur before other vowels, but only when in a stressed syllable (e.g. 'skiing' /ˈskiː.ɪŋ/, 'canoeing' /kəˈnuː.ɪŋ/).

2.10 Syllabic consonants

Syllabic consonants are frequently found in English pronunciation: these are cases where instead of an expected vowel-plus-consonant sequence, the consonant alone (usually one of /m, n, ŋ, l, r/) is pronounced with the rhythmical value of a syllable. (See Roach, 1991, pp.78-82). In EPD14, syllabic consonants were only marked where there is

ambiguity in the pronunciation of a word; for example, in a word such as 'bottle', the transcription /ˈbɒtl̩/ is said to imply unambiguously that the /l/ is syllabic, whereas in the derived form 'bottling' there may be two pronunciations, one with and one without a syllabic /l/. In this instance the EPD14 preferred pronunciation was /ˈbɒtl̩ɪŋ/, with /ˈbɒtlɪŋ/ given as an alternative.

(a) The main problem here is how to deal with optional and obligatory syllabicity and the permissibility of vowels. The most frequently found case is where an item may have (i) a schwa vowel followed by a non-syllabic consonant, (ii) a syllabic consonant not preceded by schwa or (iii) a non-syllabic consonant not preceded by schwa. For example, 'lightening' may be (i) /ˈlaɪ.tə.nɪŋ/, (ii) /ˈlaɪt.n̩.ɪŋ/ or (iii) /ˈlaɪt.nɪŋ/. Such items are transcribed as /ˈlaɪ.tᵊn.ɪŋ/ and /ˈlaɪt.nɪŋ/, the first representing cases (i) and (ii), in which there are three syllables, and the second representing only the disyllabic pronunciation, (iii). The use of superscript schwa in words such as /ˈlaɪ.tᵊn.ɪŋ/ should be interpreted as meaning that the schwa may be pronounced, or may be omitted while giving its syllabic character to the following consonant.

(b) The problem remaining is that of /l/ corresponding to the '-le' spelling form, preceded by any plosive or homorganic fricative, as in 'bottle', 'wrestle'. It is not felt to be acceptable in BBC pronunciation to pronounce this with a vowel in the second syllable, and therefore the superscript schwa convention is not used in such cases: rather, the /l/ is marked as syllabic, i.e. /l̩/. The entry for 'bottle' is /ˈbɒt.l̩/, and for 'cycle', /ˈsaɪ.kl̩/.

(c) Where a word such as the above carries a suffix with an initial vowel, as in 'bottling', 'cycling', speakers' intuitions about the number of syllables are very divergent, so no single recommendation will be adequate. The entry for 'bottle' gives the syllabic /l̩/ (three-syllable) version of 'bottling' as the first recommendation, and it is therefore necessary to add for the -ing form the two-syllable alternative /ˈbɒt.lɪŋ/.

(d) Syllabic nasals are not usual where they would result in a nasal-plosive-syllabic consonant sequence (e.g. 'London', 'abandon' must contain a schwa vowel in the final syllable).

2.11 Optional sounds

The convention used in EPD14 of printing phoneme symbols in italics to indicate that they may be omitted is retained, though used more sparingly. It is not necessary to give alternative pronunciations that simply follow general rules of simplification that apply in rapid speech. For example, pointing out the possibility of omitting the [d] sound in 'engine' seems unnecessary, whereas it does seem worth recording the fact that some speakers pronounce words such as 'lunch' and 'French' with a final /ntʃ/ while others have final /nʃ/. There is a difference between the two cases: the former is a straightforward example of elision, and needs no special explanation that refers to a specific word or class of word, while the latter is a particular case of an insertion or deletion that is restricted to a particular phonological environment; speakers are usually consistent in using one or other of the alternative pronunciations in the latter case.

2.12 Elision

As mentioned in the preceding section, there are many cases where sounds which are produced in words pronounced on their own, or in slow, careful speech, are not found in a different style of speech. This is known as *elision*, and this dictionary normally does not show elisions in order to avoid adding a large number of additional pronunciations that are typical of casual speech. It is usual to explain elision in terms of the Principle of Least Effort – we try to avoid doing more work than is necessary. We find elision most commonly in the simplification of consonant clusters. A common example is the loss of /t/ and /d/ in combination with other consonants. Examples are:

'act badly' /ˌækt'bæd.li/ (careful speech) /ˌæk'bæd.li/ (rapid speech)

'strange person' /ˌstreɪndʒ'pɜː.sᵊn Ⓤⓢ -'pɜːr.sᵊn/ (careful speech) /ˌstreɪnʒ'pɜː.sᵊn Ⓤⓢ -'pɜːr.sᵊn/ (rapid speech)

The fricative /θ/ is also frequently lost in clusters in rapid speech. Examples are:

'sixth place' /ˌsɪksθ'pleɪs/ (careful speech) /ˌsɪks'pleɪs/ (rapid speech)

Elision of vowels is also found, and again this seems to be characteristic of rapid or casual speech. Examples are:

'philosophy' /fɪ'lɒs.ə.fi Ⓤⓢ -'lɑː.sə-/ (careful speech) /fə'lɒs.fi Ⓤⓢ -'lɑːs.fi/ (rapid speech)

'persuade' /pə'sweɪd Ⓤⓢ pɚ'-/ (careful speech) /psweɪd/ (rapid speech)

Part 3: Explanatory notes

In order to explain the way in which the information in the dictionary is laid out, several entries are presented below with explanatory notes.

- Throughout the dictionary we use the convention of the cutback bar, a vertical line | which marks the place at which a word is divided so that alternative endings can be shown without having to print the entire word again.
- The brackets used for phonemic and phonetic transcriptions are not used in the entries in the dictionary, for the sake of clarity.

al- əl-, æl-
Note: Prefix. Examples include allocate /'æl.ə.keɪt/, in which it is stressed, and allure /ə'ljʊəʳ (US) -'lʊr/, where it is unstressed.
AL ,eɪ'el
Al æl
-al -əl
Note: Suffix. When forming a noun, -al does not normally affect the stress pattern, e.g. arouse /ə'raʊz/, arousal /ə'raʊ.zəl/. In forming adjectives, however, the resulting item is usually either stressed one or two syllables before the suffix, e.g. abdomen becomes abdominal /æb'dɒm.ɪ.nəl (US) -'dɑː.mə-/, adjective becomes adjectival /,ædʒ.ɪk'taɪ.vəl/.

an- æn-, ən-
Note: Prefix. When used as a negative prefix, an- is normally /æn-/, e.g. anaerobic /ˌæn.əˈrəʊ.bɪk ⓤⓢ -erˈoʊ-/, but in some items it may be reduced, e.g. anomaly /əˈnɒm.ə.li ⓤⓢ -ˈnɑː.mə-/. Otherwise, it contains /æ/ when stressed, e.g. annular /ˈænj.ə.ləʳ ⓤⓢ -lɚ/, and /ə/ when unstressed, e.g. annul /əˈnʌl/.
an *strong form:* æn *weak form:* ᵊn
Note: Weak form word. The strong form /æn/ is used mainly for contrast (e.g. 'This is an ideal, but it's not the ideal.'). The weak form is usually /ən/ (e.g., 'make an excuse' /ˌmeɪk.ən.ɪkˈskjuːs/); in rapid speech, and particularly after an alveolar or palatoalveolar consonant, it may be pronounced as a syllabic /n̩/ (e.g. 'find an example' /ˌfaɪnd.n̩.ɪgˈzɑːm.pl̩ ⓤⓢ -ˈzæm-/).
ana- æn.ə-, əˈnæ-
Note: Prefix. Either takes primary or secondary stress on the first syllable, e.g. anagram /ˈæn.ə.græm/, anatomic /ˌæn.əˈtɒm.ɪk/, or primary stress on the second syllable, e.g. anachronism /əˈnæk.rə.nɪ.zᵊm/.

In other cases, the stress may be on the penultimate or antepenultimate syllable, e.g. **reluctance** /rɪˈlʌk.tᵊnts/, **brilliance** /ˈbrɪl.i.ənts US ˈ-jənts/. Note: Suffix. Words containing **-ancy** are stressed in a similar way to those containing **-ance**; see above.
and *strong form:* ænd *weak forms:* ənd, ən, nd, n, m, ŋ
Note: Weak form word. The strong form /ænd/ is used for emphasis (e.g. 'The price included bed and breakfast.'), for contrast (e.g. 'It's not trick and treat, it's trick or treat.') or for citation (e.g. 'You should not begin a sentence with "and".'). There are several weak pronunciations. In slow, careful speech the pronunciation may be /ənd/, but is more often /ən/ (e.g. 'Come and see.' /ˌkʌm.ənˈsiː/). In more rapid speech, when it occurs between consonants, the pronunciation may be a syllabic nasal consonant with a place of articulation assimilated to the neighbouring consonants (e.g. 'cut and dried' /ˌkʌt.n̩ˈdraɪd/; 'thick and creamy' /ˌθɪk.ŋ̍ˈkriː.mi/; 'up and back' /ˌʌp.m̩ˈbæk/).

anti- æn.tı-, -ti-; æn'tı- ⓤⓢ -ţı-, -ţi-, -taı-; æn'tı-
Note: Prefix. Numerous compounds may be formed by prefixing **anti-** to other words. Most often, these compounds carry primary or secondary stress on the first syllable, e.g. **antihero** /'æn.tı,hıə.rəʊ ⓤⓢ -ţı,hır.oʊ/, **anti-icer** /,æn.ti'aı.səʳ ⓤⓢ -ţi'aı.sɚ/, but there are also cases in which the second syllable takes the primary stress, e.g. **antinomy** /æn'tın.ə.mi/.

are (*from* be) *strong form:* ɑːʳ US ɑːr *weak form:* əʳ US ɚ *occasional weak form before vowels:* r

Note: Weak form word. The strong form /ɑːʳ US ɑːr/ is used for emphasis (e.g. 'You are stupid.'), for contrast (e.g. 'You are rich, but you aren't handsome.') and in final position (e.g. 'Here you are.'). The weak form is usually /əʳ US ɚ/ (e.g. 'These are mine.' /ˌðiːz.əˈmaɪn US -ɚˈ-/; 'These are old.' /ˌðiːz.əʳˈəuld US -ɚˈould/), but when the weak form precedes a vowel, as in the last example, it often happens that the word is pronounced as a syllabic /r̩/ (e.g. /ˌðiːz. r̩ ˈəuld US -ˈould/).

Note: Weak form word. The strong form /æz/ is used in contrastive or coordinative constructions (e.g. 'as and when it's ready'), and in sentence-final position (e.g. 'That's what I bought it as.'). Quite frequently the strong form is found when the word occurs in initial position in a sentence if the following word is not stressed (e.g. 'As I was saying, ...'). The weak form is /əz/ (e.g. 'as good as gold' /əz,gʊd.əzˈgəʊld (US) -ˈgoʊld/).

When forming a verb, -ate is always pronounced with a full vowel, and the verb itself is usually stressed two syllables before the suffix, e.g. demonstrate /'dem.ən.streɪt/, unless it is a word containing two syllables, in which case the suffix normally carries primary stress in British English, e.g. rotate /rəu'teɪt ⓤⓢ 'rou.teɪt, -'-/. In nouns, -ate is normally pronounced /-ət/ or /-ɪt/, e.g. climate /'klaɪ.mət, -mɪt/, but where the noun is a chemical term it generally has a full vowel, e.g. nitrate /'naɪ.treɪt, -trɪt ⓤⓢ -treɪt/. There are numerous exceptions; see individual entries.

-atory -ə.tᵊr.i, -eɪ- (US) -ə.tɔːr.i

Note: Suffix. The pronunciation differs between British and American English. In British English, the penultimate syllable is always reduced, but the antepenultimate syllable may be stressed, and in either case may be pronounced with a full vowel, e.g. articulatory /ɑːˈtɪk.jə.lə.tᵊr.i, -jʊ-; ɑːˌtɪk.jəˈleɪ-, -jʊˈ-/. In American English, the penultimate syllable is pronounced with a full vowel (but does not carry primary stress), e.g. articulatory /ɑːrˈtɪk.jə.lə.tɔːr.i/.

Note: Prefix. Words containing be- are always stressed on the second syllable, e.g. friend /frend/, befriend /bɪ'frend/.
be *strong form:* biː *weak forms:* bi, bɪ being 'biː.ɪŋ been biːn, bɪn ⓤⓢ bɪn
Note: Weak form word. The strong form /biː/ is used contrastively (e.g. "the be all and end all") and in sentence-final position (e.g. "What'll it be?"). The weak form is /bɪ/ before consonants (e.g. "We'll be going" /ˌwil.bɪ'gəʊ.ɪŋ ⓤⓢ -'goʊ-/); before vowels it is /bi/ (e.g. "It'll be opening soon" /ˌɪt.l̩.bi'əʊ.pᵊn.ɪŋˌsuːn ⓤⓢ -'oʊ-/). Note: Prefix. Where the meaning is two, it may carry either primary or secondary stress and is pronounced /daɪ-/, e.g. **digraph** /ˈdaɪ.grɑ:f US -græf/, **diglossia** /ˌdaɪˈglɒs.i.ə US -ˈglɑ:.si-/. In other instances, it may be pronounced /daɪ-/, /dɪ-/ or occasionally /də-/, and is not normally stressed in verbs and adjectives, e.g. **digest** /daɪˈdʒest/, **diverse** /daɪˈvɜ:s US dɪˈvɜ:rs/. In nouns, however, it may carry stress, e.g. **digest** /ˈdaɪ.dʒest/. There are exceptions; see individual entries.

Di daɪ
dia- daɪə-; daɪˈæ-

Note: Prefix. Normally carries primary or secondary stress on the first syllable, e.g. **diadem** /ˈdaɪə.dem/, **diabolic** /ˌdaɪəˈbɒl.ɪk US -ˈbɑ:.lɪk/, or primary stress on the second syllable, e.g. **diagonal** /daɪˈæg.ᵊn.ᵊl/.

Note: Prefix. In words containing dis-, the prefix will normally either not be stressed, e.g. disable /dɪˈseɪ.bl̩/, or will take secondary stress if the stem is stressed on its second syllable, e.g. ability /əˈbɪl.ə.ti (US) -ţi/, disability /ˌdɪs.əˈbɪl.ə.ti (US) -ţi/. There is sometimes a difference in stress between nouns and verbs, e.g. discharge, noun /ˈdɪs.tʃɑːdʒ (US) -tʃɑːrdʒ/, verb /dɪsˈtʃɑːdʒ (US) -ˈtʃɑːrdʒ/. There are exceptions; see individual entries.

does (*from* **do**) *strong form:* dʌz *weak form:* dəz
Note: Weak form word. The strong form is used when **does** is used as a full verb (e.g. "That's what he does for a living"), for emphasis (e.g. "That does look nice") and for contrast (e.g. "It does cost a lot, but it doesn't need repairing"). The strong form also occurs in final position (e.g. "I don't like it as much as she does"). When **does** occurs in other positions as an auxiliary, the weak form is normally used (e.g. "Why does it stop?" /,waɪ.dəz.ɪt'stɒp (US) -stɑːp/).

Note: Abbreviated form of "do you": the spelling represents a pronunciation that is usually unstressed, and the pronunciation therefore parallels that of unstressed you, which has weak forms /jə/ before a consonant and /ju/ before vowels. When used contrastively, the strong form /djuː/ or /dʒuː/ may be used (e.g. "I don't like it. D'you like it?").

had *(from* **have)** *strong form:* hæd *weak forms:* həd, əd, d

Note: The strong form is used when **had** is used as a full verb rather than an auxiliary, e.g. 'We had some tea.' The auxiliary verb is a weak form word: the strong form /hæd/ is used contrastively, e.g. 'I don't know if she had or she hadn't', in final position, e.g. 'I'd read as much as he had' and quite frequently in initial position, e.g. 'Had anyone seen it before?'. It is also used for emphasis, e.g. 'It had to break down when it was raining'. Elsewhere, the weak form is usually /həd/ or /əd/. The form /d/ is usually used only after vowels.

Note: Compound words beginning with half- usually have secondary stress on this syllable and primary stress later in the compound word (e.g. half-baked has the stress pattern ˌ-ˈ-); however, the word is liable to undergo stress shift when a strongly stressed syllable follows (e.g. half-baked plan often has the pattern ˌ--ˈ-). Since there are many such words, notes about this stress shift for individual words are not given.

has (*from* **have**) *strong form:* hæz *weak forms:* həz, əz, z, s

Note: The strong form is used when has is used as a full verb rather than as an auxiliary, e.g. 'He has some money'. The auxiliary verb is a weak form word: the strong form /hæz/ is used contrastively, e.g. 'I don't know if she has or she hasn't', in final position, e.g. 'I've read as much as he has' and quite frequently in initial position, e.g. 'Has anyone seen my glasses?'. It is also used for emphasis, e.g. 'She has to have one'. Elsewhere, the weak form is usually /həz/ or /əz/. The shortest weak forms are /s/ and /z/: the form /s/ is used only after voiceless consonants other than /s, ʃ, tʃ/, while the form /z/ is used only after a vowel or a voiced consonant other than /z, ʒ, dʒ/. After /s, z, ʃ, ʒ, tʃ, dʒ/, the weak form is usually /əz/.

Note: Prefix. When the meaning of the prefix is "in", it often carries secondary stress, e.g. **inbuilt** /,ɪn'bɪlt/. The resulting compounds may undergo stress-shift (see entry for **inbuilt**). As a negative prefix, **in-** does not normally affect the stress pattern of the stem to which it is added, e.g. **active** /'æk.tɪv/, **inactive** /ɪn'æk.tɪv/. In other cases, the prefix is normally stressed in nouns but not in verbs, e.g. **increase** noun /'ɪn.kriːs /, verb /ɪn'kriːs/.

inter- ɪn.təʳ- (US) ɪn.t̬ɚ-

Note: Prefix. Normally takes either primary stress or secondary stress on the first syllable, with nouns often receiving front stress, e.g. intercom (noun) /ˈɪn.tə.kɒm (US) -t̬ɚ.kɑːm/, interact (verb) /ˌɪn.təˈrækt (US) -t̬ɚˈækt/. Exceptions exist; see individual entries. Note also that, although /r/ is normally assigned to a following strong syllable in US transcriptions, in inter- it is perceived to be morphemically linked to that morpheme and is retained in the prefix as /ɚ/.

Note: Prefix. In words containing **mis-**, the prefix may either be unstressed, e.g. **misdeal** /mɪsˈdiːl/, or receive secondary stress, especially if the stem is stressed on its second syllable, e.g. **align** /əˈlaɪn/, **misalign** /ˌmɪs.əˈlaɪn/. There is sometimes a difference between nouns and verbs, e.g. **miscount**, noun /ˈmɪs.kaʊnt/, verb /mɪˈskaʊnt/. There are exceptions; see individual entries.

must (*n. adj.*) mʌst
must (*v.*) *strong form:* mʌst *weak forms:* məst, məs

Note: Weak form word. There are two senses of must: one is concerned with supposition, or making deductions, and in this sense it is usual for the strong form to be used (e.g. 'If he's late, he must be ill'). The other sense is related to obligation: the word may be stressed, in which case it has the strong form (e.g. 'You must try harder'), or unstressed, in which case the pronunciation is either /məst/ /məs/ before a consonant, or /məst/ before a vowel (e.g. 'Each of us must buy some' /iːtʃ.əv.əs.məs,baɪ.sʌm/; 'You must always look first' /ju.məst,ɔːl.wɪz.lʊk'fɜːst ⓤⓢ -,ɑːl.weɪz.lʊk'fɜːrst/).

my *normal form:* maɪ *occasional weak form:* mɪ

Note: Occasional weak form word. The strong form is used contrastively (e.g. 'My friends and your friends') or for emphasis (e.g. 'It's *my* turn'). Many speakers do not have a special weak form, and simply produce a brief, weakened pronunciation of /maɪ/. However, some speakers do use a weak form of my in common phrases. British English speakers may have the pronunciation /mi/ before a vowel (e.g. 'On my own' /,ɒn.mi'əʊn/), and /mə/ before a consonant (e.g. 'On my back' /,ɒn.mə'bæk/). For American English, the variant /mə/ may be used before a consonant, but /mi/ is not acceptable. In British English, there is also a special form of my used by lawyers in court, in phrases such as 'my Lord' or My Learned Friend', pronounced /mɪ/ or /mə/.

Note: Suffix. When added to a stem to form a noun, -ness does not change the existing stress pattern, e.g. happy /'hæp.i/, happiness /'hæp.ɪ.nəs/.

-ness *in place names:* -'ness

Note: In place names, the suffix -ness normally takes primary stress, e.g. Inverness /,ɪn.və'nes (US) -vɚ'-/. However, placenames containing -ness are subject to stress shift; see individual entries.

Note: After decimalization of the currency in Britain, the pronunciation of compounds with penny, pence (now abbreviated to p) changed. Formerly, compounds from 1/2d to 11d invariably had /-pᵊn.i, -pᵊnts/, e.g. see entries under half-penny, fourpence, etc.. With the extension of -pence compounds beyond 11p, e.g. 12p, the reduced forms have more or less disappeared. Instead, the full forms /'pen.i/ and /pents/, or commonly /piː/, are used, e.g. 4p (/'fɔː.pᵊnts/) is /ˌfɔː'pents/ or /-'piː/; 12p is /ˌtwelv'pents/ or /-'piː/. ˌpenny ar'cade; ˌpenny 'black; ˌpenny 'dreadful; ˌpenny 'farthing

Attached to bound stems the pronunciation is normally /prɪ-/ or /prə-/ for British English and /prɪ-/ or /priː-/ for American English, e.g. prefer /prɪ'fɜː (US) priː'fɜːr/. There are exceptions; see individual entries.

Note: Prefix. In words containing pro- where the stem is free and the meaning is in favour of, it generally takes secondary stress, e.g. pro-choice /ˌprəʊ'tʃɔɪs (US) ˌproʊ-/. Attached to bound stems, the pron is normally /prəʊ- (US) proʊ-, prə-/, e.g. probation /prəʊ'beɪ.ʃᵊn (US) proʊ-/. There are exceptions; see individual entries.

Note: Prefix. In compounds containing re- where the stem is free and the meaning is "again", it is normally pronounced /ˌriː-/, e.g. re-read /ˌriːˈriːd/. Many such compounds are likely to undergo stress shift, especially in adjectives derived from verbs, e.g. ˌrearˈrange, ˌrearranged ˈfurniture. Attached to bound stems the pronunciation is normally /rɪ-, ri-/ or /rə-/, e.g. refer /rɪˈfɜːʳ ⓤⓢ -ˈfɜːr/. There are exceptions; see individual entries.

saint (S) *strong form:* seɪnt -s -s -ed -ɪd -hood -hud *weak forms:* sᵊnt, sɪnt
Note: The weak forms are usual in British English for the names of saints (and places containing the word Saint), while the strong form is used when the word occurs on its own. For example, "This would try the patience of a saint" would have the strong form, while St. John, St. Cecilia (saints' names), St. Alban's, St. Helen's (placenames) have the weak forms. In American English, the strong form is usually used in all cases. When Saint occurs in British family names (e.g. St. Clair) the pronunciation is variable and individual names should be checked in their dictionary entries.

It is also used in final position (e.g. "We both should"). The most usual weak form is /ʃəd/, as in "When should it arrive?" /ˌwen.ʃəd.ɪt.ə'raɪv/, but in rapid speech we also find /ʃd/ before voiced sounds (e.g. "I should go now" /ˌaɪ.ʃd'gəʊ.naʊ US -'goʊ-/) and /ʃt/ before voiceless sounds (e.g. "You should try to finish" /ju.ʃtˌtraɪ.tə'fɪn.ɪʃ US -t̬ə'-/).

sir (S) *strong forms:* sɜːʳ (US) sɜːr *weak forms:* səʳ (US) sɚ **-s** -z

Note: Weak form word. The strong form is used in various social situations. In school, it is often used by children to address a male teacher (e.g. "Sir, can I

go now?"), and contrastively (e.g. "Dear Sir or Madam"). Similarly, in old-fashioned speech, the strong form would be used to begin addressing someone (e.g. "Sir, you are a scoundrel"). When it occurs utterance-finally in addressing someone, either form may be used, although the weak form is more common in military usage (e.g. "Ready to sail, sir"). In the title of a Knight (e.g. Sir John Roberts), the weak form is always used.

some *strong form:* sʌm *weak form:* səm
Note: Weak form word. There are two grammatical functions for this word, one being the determiner, as in "some apples, some bananas", etc., where a weak form is used, the other being a quantifier, as in "some were tired and some were hungry", where the strong form is usual. In final position, the strong form is used (e.g. "I want some").
-some -səm
Note: Suffix. Does not normally change the stress pattern of the word to which it is added, e.g. trouble /'trʌb.ḷ/, troublesome /'trʌb.ḷ.səm/.

to (*adv.*) tuː
Note: This form of to is found in expressions such as 'to and fro'.
to (*prep.*) *strong form:* tuː *weak forms:* tʊ, tu, tə (US) tə, ţə, tu
Note: Weak form word. The strong form /tuː/ is used contrastively, e.g. 'the letter was to him, not from him', and sometimes in final position, e.g. 'I don't want to', though the /u/ vowel is more often used in this context. The weak form /tə/ is used before consonants, e.g. 'to cut' /tə'kʌt/, while the pronunciation /tu/ is used before vowels in British English, e.g. 'to eat' /tu'iːt/. In American English, the schwa form is usual before both vowels and consonants, so the latter is /tə'iːt/.

you *strong form:* juː *weak forms:* ju, jə
Note: Weak form word. The strong form is used contrastively (e.g. 'Will it be you, or me?') or emphatically (e.g. 'It was you that broke it'). Elsewhere the weak forms are used: in British English, /ju/ is the form found before vowels and in final position (e.g. 'You ought' /juˈɔːt ⓤ -ɑːt/; 'Thank you' /ˈθæŋk.ju/), while /jə/ is only used before consonants (e.g. 'if you can' /ɪf.jəˈkæn/); in American English, /jə/ predominates in both environments. The strong form is also found in unstressed syllables. Sometimes when 'you' is weakly stressed and is preceded by a word normally ending in /d/, the two words are joined closely together as if they formed a single word with the affricate sound /dʒ/ linking the two parts. Thus 'did you' is often pronounced /ˈdɪdʒ.u/, and 'behind you' /bɪˈhaɪn.dʒu/. Similarly when the preceding word normally ends in /t/ (e.g. 'hurt you') it is sometimes pronounced /ˈhɜː.tʃu ⓤ ˈhɜːr-/ and 'don't you know' as /ˌdəʊn.tʃəˈnəʊ ⓤ ˌdoʊn.tʃəˈnoʊ/.

Note: Weak form word. The strong form /jʊə ⓤ jʊr/ or /jɔː ⓤ jɔːr/ is usually used for emphasis (e.g. 'It's your fault') or contrast (e.g. 'with your looks and my brains'). This pronunciation is quite common also in weakly stressed positions in careful speech. In British English, the weak form is /jə/ before consonants (e.g. 'take your time' /ˌteɪk.jəˈtaɪm/) and /jər/ before vowels (e.g. 'on your own' /ɒn.jərˈəʊn/); in American English, /jɚ/ is used in both cases.

Cambridge University Press is part of the University of Cambridge. It is a charitable enterprise dedicated to printing and publishing for the advancement of knowledge throughout the world. In recognition of the fact that there are many parts of the world where people have difficulty in purchasing their own copies of the best books, Cambridge University Press is now publishing a series of Low Price Editions. The English Pronouncing Dictionary (15th Edition) is specially printed and priced for the benefit of students and teachers in selected countries.

A major new edition of Daniel Jones' classic pronunciation guide, thoroughly updated by two of today's most distinguished phoneticians, Professor Peter Roach, University of Reading and Professor James Hartman, University of Kansas.

Over 80,000 entries

Full coverage of North American pronunciation

Stress patterns of thousands of compounds and idioms

Clear layout. Easy to Use

All pronunciations use the International Phonetic Alphabet

As well as general vocabulary the dictionary includes:

Science and technology: including computing, medicine and communications

Literature: place names and characters from major works of literature

Encyclopedic: religions, philosophies, historic events

People: from ancient times to people in the news today

Places: thousands of British and North American place names as well as major towns and cities of the world
